Riddhix
TECHNOLOGY PVT. LTD.

Intelligent enterprise operations, *built to flow.*

LESS FRICTION. MORE INTELLIGENCE. FASTER PROGRESS.

Riddhix
TECHNOLOGY PVT. LTD.

Make enterprise operations *flow.*

LESS FRICTION. **MORE INTELLIGENCE.** **FASTER PROGRESS.**

We bring together platforms, intelligence, and productised transformation so enterprises can move faster, operate smarter, and scale with control.

Executive Agenda

A customer-facing conversation on business outcomes, anchored in Riddhix capabilities.

1

Why intelligent enterprise operations matter

The operating complexity now constraining speed, control, and growth.

2

Riddhix’s capability-led portfolio

Source-to-pay, enterprise AI, master data quality, and the capabilities that convert intent into execution.

3

How technologies converge into outcomes

AI, RPA, AP automation, MDM, ECM/ILM, and GBS/shared services working as one model.

4

Enterprise proof and customer trust

Delivery footprint, cross-industry clients, customer outcomes, and case proof.

One conversation: ***how Riddhix helps large enterprises move faster, operate smarter, and scale with control.***

Riddhix
TECHNOLOGY PVT. LTD.

Why This Matters in the Boardroom Now

Organisational value leaks when suppliers, transactions, content, contracts, data and decisions operate in fragments.

Margin Pressure	*Rising input costs, process leakage, and exception-heavy operations make margin protection harder.*
Cash Discipline	*Slow invoice cycles, weak supplier data, and delayed approvals trap working capital.*
Control and Compliance	*Audit exposure rises when workflows, contracts, records, and approvals are manually managed.*
Decision Speed	*AI and analytics only scale when the underlying data and workflows are reliable.*

The question is no longer which technology to buy. ***It's how to build an operating model that moves faster without losing control.***

Riddhix
TECHNOLOGY PVT. LTD.

The Riddhix Advantage

Built for enterprise leaders who seek speed, intelligence, and control across complex operations.

Platforms

Purpose-built technology for critical enterprise operations.

- Source-to-pay and supplier experience
- Enterprise AI intelligence
- Master data quality

A scalable digital foundation that is ready for what's next.

Intelligence

AI, agents, and analytics that convert operational signals into better decisions.

- Discover and prioritise high-impact opportunities
- Embed intelligence into everyday operations
- Enable quicker, data-backed decisions

Smarter, more adaptable operations across the enterprise.

Productised Transformation

Proven accelerators, templates, and delivery patterns that reduce reinvention.

- Pre-built assets, industry use cases, and playbooks
- Deep process and domain expertise
- Lower risk, shorter time-to-value

Faster, more predictable transformation at scale.

WHY IT MATTERS TO YOU: Fewer silos | Stronger compliance | Faster value realisation | Greater accountability

The advantage is not more technology. ***It is making technology, intelligence, and execution work as one.***

Riddhix
TECHNOLOGY PVT. LTD.

The Riddhix Product and Capability Portfolio

Three platforms for three persistent struggles: supplier friction, AI value discovery, and trusted data.

Source-to-Pay

Source-to-Pay and Supplier Experience

A modern, intelligent platform that simplifies procurement and payables while delivering a superior supplier experience.

- Supplier onboarding
- Sourcing and contracting
- AP automation
- Supplier experience and analytics
- Built-in compliance

What it changes: Supplier interaction and transaction flow

Relevance: Better supplier experience and more efficient S2P

Enterprise AI

Enterprise AI Intelligence

A platform designed to help you discover, prioritise, and operationalise AI across your enterprise.

- Process discovery and assessment
- AI opportunity prioritisation
- Agents, analytics, and automation
- Business impact modelling
- Tracking and scaling value

What it changes: How AI opportunities are identified, prioritised, and operationalised

Relevance: AI investment directed to viable, high-impact opportunities

Data Quality

Master Data Quality

A purpose-built platform to cleanse, enrich, and govern your master data for trusted, accurate, and consistent operations.

- Data profiling and cleansing
- Enrichment and standardisation
- Ongoing data quality monitoring
- Governance and lineage
- Ready for AI and analytics

What it changes: Consistency, data quality, and readiness

Relevance: Trusted data for automation, operations, analytics, and AI

The portfolio is designed to land at a priority control point and then *expand into value pools across enterprise operations.*

Riddhix
TECHNOLOGY PVT. LTD.

Source-to-Pay: The Operating Layer

A single source of truth between enterprises and suppliers, built for adoption, visibility, and compliance.

Why it matters to enterprise leaders

- Unified source-to-pay: sourcing, supplier onboarding, supplier experience and AP control on one platform.
- Greater visibility: real-time view across spend, suppliers, invoices, exceptions, and approvals.
- Built for compliance: configurable controls and workflows for policy, risk, and regulatory needs.
- Faster, more efficient operations: designed for adoption, measurable value, and ongoing improvement.

Sourcing

Reverse auctions, RFQ, configurable rules, and quote comparison.

AP Automation

OCR extraction, invoice approval, exception handling, and audit trails.

Spend Analytics

Spend visibility by category, entity, and business unit.

Supplier Experience

PO visibility, ASN, invoice visibility, and self-service.

Contract Management

Authoring, approval, renewal, and obligation visibility.

Supplier Onboarding

Validation, review, approval workflow, and supplier readiness.

Enterprise AI: Intelligence for Operations

From operational signals to real outcomes: find, prioritise, and activate AI where it matters.

1

Sense

Discover opportunities across your operations.

Extract signals from documents, transactions, supplier interactions, contracts, records and exceptions.

- Process and task discovery
- Document and data intelligence
- Pattern and exception detection
- Opportunity identification

Output: Prioritised AI opportunity pipeline

2

Decide

Prioritise and design for impact.

Translate operational data into decision support, insights, prioritisation and risk indicators.

- Impact and feasibility assessment
- Business case and ROI modelling
- Roadmap and prioritisation
- Generate and validate solution design

Output: Business case and implementation plan

3

Act

Operationalise with agents and automation.

Integrate agents, workflow orchestration, and automation into the core of your work processes.

- Agentic and task automation
- Workflow integration
- Human-in-the-loop control
- Measure and scale outcomes

Output: Production-ready AI interventions

Operational complexity into a clear path: ***from opportunity to impact.***

Riddhix
TECHNOLOGY PVT. LTD.

Master Data, MDM, and Information Governance

Trusted data, governed information, and digital work foundations for AI, automation, and shared services.

MDM governance and stewardship

Ownership workflows and stewardship models that keep master data accurate and accountable.

Information lifecycle

Manage content, records, archives, retention and disposal across the entire lifecycle.

Contracts and obligations

Enhance contract visibility, streamline approvals and renewals, improve obligation tracking.

Trusted data.
Governed information.
Digital work at scale.

Riddhix strengthens the operating foundation required for automation, AI, and shared services, with clean master data, digitised work, and governed content.

Foundation Capabilities

- Data quality and cleansing
- Data stewardship: policies, roles, processes
- MDM governance: ownership and control
- Digital workplace: digitised, searchable work
- ILM: retention and compliance

Master data quality

Standardise and enrich critical master data to minimise exceptions and rework.

Digital workplace

Digital forms, approvals, collaboration and knowledge work create searchable, traceable processes.

AP and reconciliation trust

Minimise exceptions, enhance audit trails and improve invoice and reconciliation accuracy.

Clean data is the foundation for everything that follows. ***Master data quality comes first.***

Riddhix
TECHNOLOGY PVT. LTD.

How Riddhix Creates Outcomes

Bringing together platforms, intelligence, automation, data, and service delivery into one cohesive operating model.

One coordinated operating model across source-to-pay, finance, content, contracts, master data, GBS/shared services and decisions.

1. Platforms

Digital products built for enterprise operations.

- Source-to-pay, supplier experience, AP workflows, spend visibility
- Data quality and MDM

A strong foundation for operational efficiency.

2. Intelligence

Find, prioritise, and design value with AI.

- AI consulting, agents, and AI-led solutions
- Process and business intelligence on enterprise platforms and open-source models

Turn opportunities into visible use cases.

3. Automation

Execute with speed and consistency.

- RPA, AP automation, workflow orchestration
- Agentic automation and digital workplace
- Digitised forms, approvals, processes

Reduce manual effort and cycle times.

4. Data and Governance

Trusted, governed data across the enterprise.

- Data quality, MDM governance, stewardship
- ECM, ILM, CLM, and records control

Enable reliable, compliant, AI-ready data.

5. GBS / Shared Services

Deliver at scale.

- People, process, and technology working together
- Standardised delivery across AP, vendor operations, reconciliation, content, and data

Scale outcomes across the enterprise.

BUSINESS OUTCOMES	**Cleaner, trusted data for better decisions**	**Shorter cycle times, higher productivity**	**Stronger compliance and auditability**	**Better employee and supplier experience**

The impact is measurable: ***faster operations, higher confidence, stronger compliance, and scalable service delivery.***

Riddhix
TECHNOLOGY PVT. LTD.

Productised Transformation

Riddhix doesn’t leave customers with software; we package the entire adoption journey.

Diagnose the Control Point

Identify where value leaks across suppliers, transactions, content, contracts, records, or data.

- Process, data, and technology diagnostics
- Root cause and value opportunity assessment
- Clear prioritisation of what to fix first

Outcome: A prioritised transformation roadmap.

Deploy Product-led Solution

Anchor the fix through source-to-pay, enterprise AI, master data quality, or digital workplace capabilities.

- Pre-configured for accelerated delivery
- Built-in compliance, security and scalability
- Integrate with your landscape

Outcome: Faster, lower-risk deployment with proven solutions.

Accelerate with Playbooks

Use implementation kits, workflow templates, integrations, accelerators, and adoption methods.

- Pre-built templates and configurations
- Proven methodology and governance
- Change enablement and user adoption

Outcome: Quicker time-to-value and higher adoption.

Expand Value Pools

Move into adjacent use cases across AP, S2P, automation, MDM, ECM, CLM, ILM, and AI.

- Scale to more processes and business units
- Leverage data and learnings to drive new value
- Continuous improvement with measurable outcomes

Outcome: Repeatable scaling across the enterprise.

Proven technology. Practical adoption. Measurable outcomes. ***Transformation on your terms.***

Riddhix
TECHNOLOGY PVT. LTD.

Enterprise Proof

Riddhix brings engineering depth and a delivery footprint across industries, backed by Siddhi Softwares.

15+
Years of group experience

749
Satisfied clients (group)

12
Industries served

5+
Ready-to-deploy products

Trust Markers

- Security-first code and cloud-native delivery
- NDA signed before project details are discussed
- Scope, timeline and budget agreed in writing
- Maintenance, monitoring and support after launch
- Stack: React, Node.js, Flutter, Python, AWS, Firebase, PostgreSQL

What this means for enterprise leaders

Riddhix can start from a priority business problem and bring the right blend of platform, AI, automation, data, and information governance to deliver measurable outcomes.

The result: greater efficiency, trusted data, stronger compliance, scalable value.

Real capability. Measurable outcomes. ***Built for what's next.***

Riddhix
TECHNOLOGY PVT. LTD.

Our Roots: Backed by Siddhi Softwares

Riddhix is the parent-backed technology arm of Siddhi Softwares, a Bilaspur (Chhattisgarh) software company.

Siddhi Softwares

Siddhi sees itself as an integral part of each client's organisation, with deep expertise in mobile applications, web portals, web applications and APIs, and a personal commitment to every client's specific needs.

15+

Years of experience

749

Satisfied clients

Global reach

Our best work has reached clients across geographies, and their satisfaction drives how we deliver.

WHAT THE GROUP DELIVERS

API Development

Integrations and APIs that connect systems cleanly.

Mobile Applications

Apps built for daily use.

Web Sites and Applications

Portals and web apps for business.

IT Consultancy

Strategy aligned to business goals.

Digital Marketing

Growth for the products we build.

Experience you can build on. ***15+ years of delivery behind every Riddhix project.***

Riddhix
TECHNOLOGY PVT. LTD.

Customer Trust Across Core Industries

Delivery experience in power, coal, education, transport and enterprise, built over 15+ years.

POWER

NTPC, Bilaspur

Software delivered for NTPC’s Bilaspur operations, supporting day-to-day work where reliability and process discipline matter.

COAL

Coal-sector companies

Solutions delivered for multiple coal companies in and around the Bilaspur region, where operations run at scale.

EDUCATION, TRANSPORT, ENTERPRISE

Institutions and businesses

School, college, transport and e-commerce platforms, payment gateways and case management systems for growing organisations.

749 satisfied clients and 15+ years of delivery across the Siddhi Softwares group.

Ready Solutions in Practice

Productised platforms that cut build time, so customers go live faster with proven functionality.

iTrans Transport Management	Manage fleets, trips and transport operations on one platform. ***Transport and logistics***
School Management Application	Admissions, records, fees and communication for schools and colleges. ***Education***
Online Exam Portal	Conduct and evaluate exams online, with results available quickly. ***Education and assessment***
MLM Software	Member, network and payout management for multilevel marketing businesses. ***Direct selling***

The common thread: ***Riddhix turns repeatable business processes into software that is ready to deploy.***
